

Smoke alarms save lives!

Fit one on every floor of your home
and test the batteries regularly

**IF THERE'S A FIRE... Get Out
Stay Out
and call
999**

- The best way for you to protect yourself and your home is to buy a smoke alarm. Smoke alarms cost from as little as £5 and you can get them from supermarkets and in high-street stores.

Remember – every three days someone dies from a fire caused by a cigarette.

GET SMART!

Information that could save your life.

GET EQUIPPED!

Investing in your own safety.

GET OUT!

Make a plan. Be prepared.

This is one of a series of leaflets in the 'Get Smart! Get Equipped! Get Out!' fire safety range available from your local Fire and Rescue Service. Other leaflets in the series provide advice on fire safety equipment, fire safety for parents and children, and extra information for those with eyesight problems or problems getting around.

Translations and alternative formats are also available.

Cigarette fires

PROTECT YOUR HOME FROM FIRE

Cigarette safety – the essentials

More people die in fires caused by smoking than in fires with any other single cause. Because tobacco is designed to stay alight, cigarettes can easily start an accidental fire.

Keep your home and family safe from fire.

Use your common sense – know the risks and make sure when you put it out, it really is out!

Real life – dying for a smoke?

Nick was 21, and enjoying his final year at university. Just before Christmas 2001, he came home from a night out and fell asleep on the sofa, unaware that a cigarette end was still smouldering. The sofa began to burn, filling the room with smoke. Nick was woken by the heat but collapsed from the toxic fumes. There was no smoke alarm fitted and the alarm was not raised till the next morning. The fire was fairly small, but it was enough to kill a 21-year-old.

CIGARETTE SAFETY

Put it out, Right out!

Make sure when you put out a cigarette, it really is out.

- Take extra care if you smoke when you're drowsy, taking prescription drugs, or if you have been drinking. It's too easy to fall asleep and not notice that a cigarette is still burning.
- Don't light up if you need to lie down. Despite the risk of falling asleep or setting the bed on fire, people are still smoking in bed.
- People often like to smoke when they're drinking. But someone who has had a few drinks can end up passing out with a cigarette in their hand. The result? Severe burns, permanent scarring, or even death.

They are hotter than you think – cigarettes can burn at temperatures of over 700°C.

- Don't leave a lit cigarette, cigar or pipe lying around. They can easily overbalance as they burn down, land on a carpet or a newspaper, and start a fire.

- Take responsibility and keep lighters and matches out of reach of children.
- Every year children die from starting fires with cigarettes and lighters they shouldn't have.

- Consider buying child-resistant lighters and matchboxes. Matchboxes now carry this warning label.

- Use a proper ashtray. Make sure the ashtray is heavy, can't tip over easily, and is made of a material that won't burn.
- Never tap your ash into a wastepaper basket – only an ashtray. Make sure it can't be easily knocked over and don't let ash build up.
